

# BIOFERTILIZERS APPLICATION FOR SUSTAINABLE ECONOMIC DEVELOPMENT: ADVANTAGES AND CONSTRAINTS

## Contents

---

ADVANTAGES OF USING BIOFERTILIZERS IN AGRICULTURE .....	1
Low cost and easy application techniques .....	2
Increase of the yield with additional 15-35% in most vegetable crops .....	3
Provision of nitrogen and several growth hormones.....	4
Do not cause atmospheric pollution but increase soil fertility .....	4
Excretion of antibiotics and acting as pesticides .....	5
Improvement of physical and chemical properties of soil .....	6
Enhance crop yield even under ill irrigated conditions .....	7
Eco-friendly and pose no danger to the environment .....	7
LIMITATIONS .....	8
Lack of regulatory acts and facilities for testing the samples .....	8
Insufficient popularization of biofertilizers and low level of farmer acceptance .....	8
Possible risks for the safety of consumers and the physicochemical and biological stability of soils .....	9
Decline in the population of bacteria under certain climate conditions and influence of surrounding microflora and fauna .....	10
Requirements for application.....	10
CONSTRAINTS IN BIOFERTILIZER PRODUCTION TECHNOLOGY .....	11
Technological constraints .....	11
Infrastructural constraints .....	14
Financial constraints .....	15
Physical and environmental constraints.....	15
Human resources and quality constraints.....	18
REFERENCES.....	22

## ADVANTAGES OF USING BIOFERTILIZERS IN AGRICULTURE

---

Biofertilizers are defined as formulations containing either living or latent cells of efficient strains of microorganisms that facilitate the uptake of nutrients from crop plants. They execute this pivotal role through interactions in the plant rhizosphere when applied through seed or soil.
